

Antibiotic Stewardship

Each year in the US, 2 million people suffer from serious bacterial infections that are resistant to one or more prescribed antibiotics, and at least 23,000 people die as a direct result of these antibiotic-resistant infections.

Antibiotic resistance is a natural process that occurs when bacteria are exposed to antibiotics and learn to survive them. This is a major public health problem because it makes many infections harder to treat.

Why Rapid Molecular Diagnostic Test

UTI is a common infection of the urinary tract. It is caused by bacteria that enter the bladder through the urethra. Symptoms include a burning sensation when urinating, frequent urination, and cloudy or bloody urine.
